Amendments to the Claims

Please replace the original claim set with the following replacement claim set.

1. (Currently Amended) Textile adhesive tape consisting essentially of:

an adhesive tape support (1) formed by a textile, mechanically reinforced, nonwoven fiber material having a basis weight of not more than 60 g/m²; and

an adhesive coating (2) adjacent to the tape support at least at one side of said tape support (1);

wherein the nonwoven fiber material is impregnated by dipping or spraying with a thermoplastic resin with a basis weight of the impregnation of 1 to 5 g/m², in such a way that so as to imbue the nonwoven fiber material with the thermoplastic resin, whereby penetration of the adhesive coating through the nonwoven fiber material is prevented.

- 2. (Original) Adhesive tape according to Claim 1, characterized by the fact that the nonwoven material is reinforced by needling in a needle bed.
- 3. (Previously Presented) Adhesive tape according to Claim 1, characterized by the fact that the nonwoven material is reinforced by at least one process of air or water jets.
- 4. (Cancelled)
- 5. (Previously Presented) Adhesive tape according to Claim 1, characterized by the fact that the nonwoven material is a fiber material selected from the group consisting of viscose fibers, polyester fibers, propylene fibers, and a fiber blend of at least two of the aforementioned fiber materials.
- 6. (Previously Presented) Adhesive tape according to Claim 1, characterized by the fact that the adhesive coating (2) is selected from the group consisting of a natural rubber adhesive, a synthetic rubber adhesive, an acrylate adhesive, and a UV-crosslinkable acrylate adhesive.

- 7. (Previously Presented) Adhesive tape according to Claim 1, characterized by the fact that the basis weight of the adhesive coating (2) is about 90 to 150 g/m².
- 8. (Previously Presented) Adhesive tape according to Claim 1, characterized by the fact that a PET nonwoven having a basis weight of 40 g/m^2 is used as the textile nonwoven material and that the adhesive coating comprises a synthetic rubber adhesive with a basis weight of 130 g/m^2 .
- 9. (Previously Presented) Adhesive tape according to Claim 1, characterized by the fact that the textile nonwoven comprises a PET nonwoven and has a basis weight of 50 g/m^2 and that the adhesive coating comprises a UV-crosslinkable acrylate adhesive with a basis weight of 150 g/m^2 .
- 10. (New) Textile adhesive tape consisting of:

an adhesive tape support (1) formed by a textile, mechanically reinforced, nonwoven fiber material having a basis weight of not more than 60 g/m²; and

an adhesive coating (2) adjacent to the tape support at least at one side of said tape support (1);

wherein the nonwoven fiber material is impregnated by dipping or spraying with a thermoplastic resin with a basis weight of the impregnation of 1 to 5 g/m² so as to imbue the nonwoven fiber material with the thermoplastic resin, whereby penetration of the adhesive coating through the nonwoven fiber material is prevented.
